

SPECIFICATION AMENDMENTS

Please amend paragraph 0029 of the specification as follows.

[0029] As is shown by the dashed line area in Figure 1a, a thermally insulating material 19 can also be arranged in the cavity 18 which is provided between the inner wall 16 of the bubble 9 and the components 4, 5, and this further prevents heat being transferred to the components 4, 5 during the soldering process.
